

Cybersecurity Consultant with professional experience conducting comprehensive security audits (internal and external pentesting) and designing strategic enterprise defense solutions. I specialize in the end-to-end development of custom security tools, ranging from OSINT systems and data leak monitoring to the architecture and deployment of SIEM platforms like Wazuh. Currently, my work focuses on the intersection of cybersecurity and artificial intelligence, leading the deployment of AI agents powered by both local models and multi-provider APIs. My technical expertise extends to the fine-tuning of LLMs for specialized behaviors and the development of proprietary multi-agent ecosystems and MCP (Model Context Protocol) servers. Passionate about robotics and technological innovation, my ultimate goal is to build resilient, next-generation autonomous systems and secure-by-design AI architectures.

Education

National University of Distance Education Galicia, Spain
Master’s degree in Cybersecurity. September 2026
Malware Analysis, cryptography, critical infrastructure security, machine learning for Cybersecurity, ethical hacking.
Thesis: Penetration Testing Automation Using GenAI Agents

Santiago de Compostela University Galicia, Spain
Bachelor’s degree in Computer Science. July 2023
Programming, software engineering, cybersecurity, databases, parallel computing, operating systems, networks, introductory AI, data analysis and cloud computing. Thesis: Code Obfuscation System for HIDS Bypass and Operational Analysis

Experience

dooingIT Cybersecurity S.L Santiago de Compostela
Cybersecurity Consultant June 2024 – Present

- **Bug Hunting & Penetration Testing: Conduct** comprehensive penetration tests to identify vulnerabilities, demonstrate security impact, and propose actionable mitigation strategies for system hardening.
- **Full-Stack Development: Program** custom client tools and applications, handling everything from Next.js and TypeScript front-end design to API integration and backend architecture.
- **Blue Team Solutions: Manage** the deployment and configuration of SIEM platforms, specializing in Wazuh for robust network system protection and monitoring.
- **Local LLM Deployment: Evaluate and deploy** optimized local Large Language Models (LLMs), executing fine-tuning processes tailored to specific architectural requirements.
- **AI Guardrails Implementation: Define and integrate** strict security guardrails into AI systems to ensure safe, reliable, and controlled model behavior.
- **AI Agent Development: Build** specialized AI agents to automate routine tasks, maximizing response quality while highly optimizing token efficiency and overall performance.

Gradient Vigo
Cybersecurity Engineer September 2023 – May 2024

- **Cybersecurity Engineering:** Executed core cybersecurity operations, implementing robust security protocols and defense mechanisms across systems.
- **Quality Assurance & Testing:** Conducted comprehensive testing phases to validate software functionality, security, and overall performance.

- **Secure Software Development:** Engineered an innovative technological solution, rigorously applying secure-by-design principles throughout the development lifecycle.
- **Backend CI Implementation:** Designed and built Continuous Integration (CI) pipelines for backend environments to streamline and secure the release process.
- **Build Automation:** Configured and managed modern build automation tools to optimize workflows and accelerate the software delivery lifecycle.
- **Frontend Development:** Designed and developed dynamic, responsive, and user-friendly interfaces utilizing Angular.
- **Service Integration:** Developed RESTful APIs and middleware services to establish secure, seamless communication between frontend and backend architectures.

dooingIT Cybersecurity S.L

Cybersecurity Consultant Intern

Santiago de Compostela

March 2023 – May 2023

- **Hacking & Product Development:** Collaborated with the core hacking and product development team, managing project planning, product backlogs, and Minimum Viable Product (MVP) delivery utilizing Git and cloud environments.
- **Task Automation & Reporting:** Automated operational workflows and generated dynamic, evolutionary risk management reports, including specific tracking for the AKIRA framework.
- **Cybersecurity Testing:** Conducted rigorous testing and validation of cybersecurity solutions to ensure reliability and robust defense capabilities.
- **Agile Project Management:** Actively participated in project organization using Agile methodologies, engaging in daily Scrum meetings, retrospectives, and leveraging project management tools to streamline workflows.

dooingIT Cybersecurity S.L

Cybersecurity Consultant Intern

Santiago de Compostela

June 2022 – September 2022

- **Hacking & Product Development:** Collaborated with the core hacking and product development team, managing project planning, product backlogs, and Minimum Viable Product (MVP) delivery utilizing Git and cloud environments.
- **Cybersecurity Testing:** Conducted rigorous testing and validation of cybersecurity solutions to ensure reliability and robust defense capabilities.
- **Agile Project Management:** Actively participated in project organization using Agile methodologies, engaging in daily Scrum meetings, retrospectives, and leveraging project management tools to streamline workflows.

Projects

- **Penetration Testing Automation Using GenAI Agents**
 - **Description:** Engineered a multi-agent system leveraging the RALPH loop to execute end-to-end security audits. The platform autonomously identifies vulnerabilities, exploits them to demonstrate security impact, and dynamically generates comprehensive penetration testing reports.
 - **Tech Stack:** Python, llama.cpp, unsloth.

- **HelStrike**
 - **Description:** Building an advanced multi-agent architecture utilizing Hermes Agent for automated code auditing and domain/wildcard analysis. The system features an autonomous Kanban-based workflow that dynamically generates specialized agents, orchestrates multi-provider AI APIs (OpenRouter), delegates specific tasks to local models via vLLM, and continuously updates a centralized knowledge base.
 - **Tech Stack:** vLLM, OpenRouter, Next.js, OpenCode, Kanban, Markdown, Obsidian.
- **Custom OSINT & Data Leak Monitoring Platform**
 - **Description:** Engineered an advanced OSINT tool that continuously monitors multiple platforms to detect credential leaks and identify potential vulnerabilities, delivering proactive early warning notifications to users to mitigate security risks.
 - **Tech Stack:** Next.js, FastAPI, Python, TypeScript, Elasticsearch, Docker, Jaeger.

Certifications

- Certified Professional Penetration Tester
- Remote Pilot Certificate of Competence (A1, A2, A3)

Skills

- **Technical:**
 - Languages and frameworks: Python, Java, C, JavaScript, Next.js, TypeScript, Bash.
 - Tools: Advanced Kali Linux Toolset, Docker, Burp suite, Kubernetes, Git, Visual Studio Code, Claude Code, Antigravity.
 - AI Frameworks: Unsloth, PyTorch, Scikit-learn, Hermes Agent, LangChain, HuggingFace (Transformers)
 - Databases: Elasticsearch, PostgreSQL, MySQL, MongoDB
 - Cloud: Azure, Google Cloud Platform, AWS
- **Languages:**
 - Galician (Native)
 - Spanish (Native)
 - English (C1)
